

GL-137 — Owner can edit or clear an item's description

Test run 1 | 2026-09-28 | Re-test of a previous run: **No** | Epic: GL-135

Verdict

Ticket cases: **PASS 23** · FAIL 0 · BLOCKED 0 · NOT RUN 0
Proposed cases: **PASS 6** · **FAIL 1** · NOT RUN 1 · text-only 1

The proposed cases (P01–P09) are **not yet adopted into the ticket**. They await the human's decision at the results gate. One proposed case, **P09**, failed: a low-severity giftlist-web defect where a description ending in U+0085 gives a false "hasn't shown up yet" notice although the save actually succeeded. A related but out-of-scope defect was found while diagnosing P09 (list-rename trim mismatch, pre-existing on main since GL-25 — "Fix 2" below); it does not belong to GL-137 and does not block this ticket.

All ticket cases TC-T2-01...23 PASS and all automated suites are green. Because one proposed case failed, this run is not an unqualified "ready for review" — the FAIL is confined to a proposed (not-yet-adopted) case, and is called out explicitly for the results-gate decision.

Environment

Repo	SHA	PR
giftlist-giftlists	aceff94	#9 (GL-138), merge 1 of 4
giftlist-reservations	88a1448	#12 (GL-139), merge 2 of 4
giftlist-gateway	cf1a2fa	#13 (GL-140), merge 3 of 4
giftlist-web	4b325d3	#12 (GL-141), merge 4 of 4
giftlist-buildingblocks	3c1fca8	main (unaffected)
giftlist-identity	18cd5f6	main (unaffected)

Packages: GiftLists.Contracts 0.3.0 and @giftlist/gateway-client 0.3.0, both already present and unchanged. Reservations pins GiftLists.Contracts [0.3.0] with no code change. Stack brought up via `make reset && make up`; all seven containers healthy at 2026-09-28T10:15 UTC.

Automated suites

Repo	Suite	Command	Passed/Failed/Skipped	Duration
giftlist-web	Vitest	<code>npx vitest run</code>	228/0/0 (27 files)	4.77s
giftlist-giftlists	UnitTests + Architecture	<code>dotnet test tests/GiftLists.UnitTests</code>	220/0/2	57ms
giftlist-gateway	UnitTests + Architecture	<code>dotnet test tests/Gateway.UnitTests</code>	88/0/2	664ms
giftlist-reservations	UnitTests + Architecture	<code>dotnet test tests/Reservations.UnitTests</code>	69/0/2	55ms
giftlist-giftlists	IntegrationTests	<code>dotnet test tests/GiftLists.IntegrationTests</code>	41/0/0	57s
giftlist-gateway	IntegrationTests	<code>dotnet test tests/Gateway.IntegrationTests</code>	102/0/0	14s
giftlist-reservations	IntegrationTests	<code>dotnet test tests/Reservations.IntegrationTests</code>	19/0/0	4s

Environmental note (resolved): the first GiftLists.UnitTests run failed one architecture test (missing `project.assets.json` for a sibling project) because only the test project had been restored, not the whole solution. Fixed by restoring the full `.sln` before unit tests thereafter; re-run was clean (220/0/2). Treated as environmental, not a product defect. The 2 skips per repo's unit suite are pre-existing deferred architecture rules, unrelated to GL-137.

Test cases (ticket)

--	--	--	--	--

Case	Title	Level	Outcome	Notes
TC-T2-01	Owner edits, sees it without reload	acceptance	PASS	Subtitle updated with no reload; both stores match; exactly 1 event on the bus
TC-T2-02	Owner clears a description	acceptance	PASS	Subtitle disappeared; both stores hold null
TC-T2-03	Guest sees the edited description on load	acceptance	PASS	Fresh guest load showed the new text
TC-T2-04	Non-owner's change rejected	integration (GiftLists)	PASS	
TC-T2-05	Unauthenticated caller cannot change	integration (Gateway)	PASS	
TC-T2-06	Guest view has no edit control	web	PASS	
TC-T2-07	Edit input stops at 2000 chars	web	PASS	
TC-T2-08	Service accepts 2000, rejects 2001	integration (GiftLists)	PASS	
TC-T2-09	No edit on expired list	integration + web	PASS	
TC-T2-10	Editing a removed item rejected	integration (GiftLists)	PASS	
TC-T2-11	Redelivered command publishes once	integration (GiftLists)	PASS	
TC-T2-12	Same value is a no-op	integration (GiftLists)	PASS	
TC-T2-13	Redelivered event leaves projection unchanged	integration (Gateway)	PASS	
TC-T2-14	Late add doesn't restore old description	integration (Gateway)	PASS	
TC-T2-15	Change before add converges	integration (Gateway)	PASS	
TC-T2-16	Change for removed item never returns it	integration (Gateway)	PASS	Also re-proven acceptance-style, see P05
TC-T2-17	Older late change ignored	integration (Gateway)	PASS	
TC-T2-18	Two quick edits from two tabs converge	acceptance	PASS	Executed per P02's precise expected result; Jira's own wording quotes the wrong notice
TC-T2-19	"Not confirmed" notice on a change that never lands	web	PASS	Correct assertion; Jira's quoted wording is wrong (see P03)
TC-T2-	New event's field set is exact	integration + acceptance	PASS	Raw bus payload matched exactly {ListId,ItemId,Description,ChangedAt}

20				
TC-T2-21	Owner's edit flow never reads reservation data	integration (Gateway)	PASS	Positive-control gap noted at P06
TC-T2-22	Guest payload unchanged after an edit	acceptance	PASS	Field set exactly {itemId,name,description,url,reserved}
TC-T2-23	Regression: add/remove/rename, guest reserves	acceptance	PASS	List rename (no item-level rename exists) propagated correctly; reservations unaffected on [0.3.0]

Proposed test cases

From test-runs/1/coverage-review.md §4. Not part of the ticket; awaiting the human's decision at the results gate.

Case	Title	Outcome
TC-GL-137-P01	Guest sees no subtitle after the owner clears	PASS
TC-GL-137-P02	Two quick edits converge (replaces TC-T2-18's expected result)	PASS
TC-GL-137-P03	Correct the notice text in TC-T2-19	text-only
TC-GL-137-P04	Reservations still handles item events on [0.3.0]	PASS
TC-GL-137-P05	Change→remove→late add never resurrects	PASS
TC-GL-137-P06	Reservation read counter proves it's live (strengthens TC-T2-21)	NOT RUN
TC-GL-137-P07	Racing edits store the later event's value	PASS
TC-GL-137-P08	Command's field set is exact	PASS
TC-GL-137-P09	.NET-trims-but-JS-doesn't still confirms	FAIL (expected)

P06 NOT RUN: requires an in-process call counter wired into the reservation-projection port's DI graph — not observable black-box from outside the process, and the run instructions did not authorize adding code to a PR branch to expose it. TC-T2-21 itself passed (0 reservation-port reads across the owner's edit-then-confirm flow), which is the weaker evidence P06 was proposed to strengthen.

P03 text-only: no test to run — the web test already asserts the correct notice text; only the Jira case wording is wrong.

Failures

TC-GL-137-P09 (expected failure) — proposed case, not yet adopted

Expected: entering "New" + U+0085 (NEL) and saving should be indistinguishable from "New" — no notice, subtitle "New".

Observed: the owner saw the yellow notice "That change hasn't shown up yet. It may still be processing — try refreshing in a moment." even though the save had, in fact, succeeded — GiftLists stored description: "New" (U+0085 trimmed server-side by .NET's Trim()).

Suspected cause (confirmed): the web's confirmChange predicate compares against the value as JS trim() leaves it, but JS trim() does not strip U+0085 while .NET's Trim() does. The predicate never matches the server's normalised value, the confirm ladder runs out, and the owner gets a false notice on a save that worked. Real, low-impact defect in giftlist-web (ListDetailOwnerPage.tsx's handleChangeDescription).

P09 — expected to FAIL against web 4b325d3 (R-d). Ran against the live stack.

Steps:

1. Hoodie's description editor open, prior value "C".
2. Typed "New" followed by U+0085 (NEL, codepoint 133) — confirmed via `Array.from(value).map(c=>c.codePointAt(0)) = [78,101,119,133]`, length 4.
3. Clicked Save.

Observed:

- The form stayed in "Saving..." then, after the confirm ladder ran out, showed the yellow notice: "That change hasn't shown up yet. It may still be processing — try refreshing in a moment." with Save re-enabled — i.e. the web treated this as an unconfirmed / failed save.
- The GiftLists store (source of truth) actually holds description: "New" (the U+0085 was trimmed server-side by .NET's Trim()) — the save had, in fact, fully succeeded.

This reproduces R-d exactly as predicted: JS's trim() does not strip U+0085, so the web's confirmChange predicate keeps comparing against the untrimmed "New\u0085" and never matches the server's "New", producing a false negative notice on a save that worked. Real, low-impact defect (P09 was predicted to fail; it did).

Proposed fixes

Written by the defect analyst. Proposals only, awaiting a decision — not applied to any branch during this run.

Fix 1 — TC-GL-137-P09: product defect in giftlist-web (low severity, does not block merge)

Classification: product defect, not environmental — the projection held "New" before the first confirm read. Suggested to fold into web PR #12.

Root cause: ListDetailOwnerPage.tsx:476 (handleChangeDescription) uses JS .trim() for both the value it sends and the value confirmChange waits for; GiftLists normalises with .NET Trim()/IsNullOrWhiteSpace. Same failure appears for U+0085 alone, "C"+U+0085 when "C" is already stored, and a leading U+0085.

Proposed fix (web only):

```
// GiftLists normalises with .NET string.Trim() (char.IsWhiteSpace), which also strips U+0085;  
// JS trim() does not. \s is exactly trim()'s set, so this only adds U+0085.  
const trimLikeGiftLists = (value: string) => value.replace(/^[\\s\\u0085]+|[\\s\\u0085]+$/g, "");
```

Proposed regression tests in ListDetailOwnerPage.test.tsx: confirm the RPC is called with the server-trimmed value, and confirm a description holding only U+0085 sends and confirms null. Also proposed: adopt P09 into the ticket and re-run it at acceptance level. Risk assessed as very low — only the description-edit path changes, only for U+0085 at either end.

Fix 2 — related defect found while diagnosing, out of scope for GL-137

handleRename (ListDetailOwnerPage.tsx:361) sends and compares renameValue untrimmed, but the GiftListName constructor trims. Renaming to "Birthday " (an ordinary trailing space) is stored as "Birthday", and the owner gets the same false notice. Already present on main since GL-25 — pre-existing, not introduced by this ticket. **Does not block GL-137.** Proposed as a separate ticket: send and compare a trimmed value using the same helper as Fix 1, with a regression test for a rename with surrounding whitespace.

TC-GL-137-P06 (NOT RUN) — hides no defect

The owner branch of ViewGiftListInteractor returns GiftListView.ForOwner(list) without using IReservationProjectionRepository; RecordGiftItemDescriptionChangedInteractor depends only on IGiftListProjectionRepository. ReservationProjectionPortIsolationTests passed (88/0/2) and pins ViewGiftListInteractor as the only holder of the port. P06 would add a positive-control proof for the TC-T2-21 counter — a nice-to-have to adopt later.

Other notes

- **TC-T2-18 / TC-T2-19 wording:** Jira's text for both quotes "This hasn't been confirmed yet...", which is the *delete* notice; the control this feature uses shows "That change hasn't shown up yet. It may still be processing — try refreshing in a moment." Judged on behaviour (both PASS); wording discrepancy noted, not used to FAIL either case.

- Jira's "Contract / package impact" section still says Reservations "stays at [0.2.0]", contradicting AC9 and the actual PR ([0.3.0], pin only, no code change). This run tested the real state ([0.3.0]), which is correct per AC9 and D1.
- No product code or tests were changed on any PR branch during this run. Where the coverage review called for a new automated test the runner could not add (P05, P07, P08), the guarantee was instead exercised directly against the running stack or via a standalone scratch check kept outside the repos.

Stack state

Torn down after the defect analyst finished inspecting the P09 failure. All seven containers and the network removed; all seven main clones restored to main, clean and matching origin/main. The four PR worktrees were left untouched, each clean and at the exact tested head SHA.

Appendix — evidence

Remaining evidence not already shown inline above.

TC-T2-01 — owner page, Mongo (both stores), captured event

See evidence/TC-T2-01-owner-page.txt, evidence/TC-T2-01-mongo-giftlists.json, evidence/TC-T2-01-mongo-gateway-projection.json, evidence/TC-T2-01-and-TC-T2-20-captured-event.json

TC-T2-02 — Mongo, both stores hold null

See evidence/TC-T2-02-mongo-both-stores.json

TC-T2-03 — guest view

See evidence/TC-T2-03-guest-view.txt

TC-T2-18 / P02 / P07 — two-tab race

See evidence/TC-T2-18-and-P02-two-tab-race.json

TC-T2-22 — guest payload field set

See evidence/TC-T2-22-guest-payload.json

TC-T2-23 — rename propagation

See evidence/TC-T2-23-rename.json, evidence/TC-GL-137-P04-and-TC-T2-23-reservations-on-030.json

P01 — guest sees no subtitle after clear

See evidence/TC-GL-137-P01-guest-after-clear.json

P05 — change→remove→late add never resurrects

See evidence/TC-GL-137-P05-change-remove-late-add.json

P08 — command field set is exact

See evidence/TC-GL-137-P08-command-field-set.txt
