

GL-137 — Owner can edit or clear an item's description

Test run 2 | 2026-10-02/03 | Re-test of a previous run: **Yes — fix verification** (not the pre-merge re-test) | Epic: GL-135

Verdict

Ticket cases: **PASS 29** · FAIL 0 · BLOCKED 0 · NOT RUN 0
Proposed cases: **PASS 1** (TC-GL-137-P10) · FAIL 0 · NOT RUN 0

All 29 ticket cases PASS and all automated suites are green. Proposed case **TC-GL-137-P10** PASS, exercised at acceptance level — it is **not yet adopted** into the ticket, pending the human's decision at the results gate. Run 1's P09 / TC-T2-29 defect (the U+0085 trim mismatch) is confirmed fixed, both at the web level (regression tests) and at acceptance level (the real save/confirm flow).

Environment

Repo	SHA	PR
giftlist-giftlists	ddd9498	#9 (GL-138), merge 1 of 4
giftlist-reservations	d4d39e9	#12 (GL-139), merge 2 of 4
giftlist-gateway	172eb72	#13 (GL-140), merge 3 of 4
giftlist-web	523c2aa	#12 (GL-141), merge 4 of 4
giftlist-buildingblocks	3c1fca8	main (unaffected)
giftlist-identity	18cd5f6	main (unaffected)
giftlist-devenv	13e4351	main (unaffected by GL-137; new PUBLIC_HOST/LAN merge, PR #7)

Commits added since run 1 (excluding each repo's run-1 report-PDF commit, which sits in between)

Repo	Commit	What it was for
giftlist-giftlists	ddd9498	Strengthened the TC-T2-27 race test; added the TC-T2-28 command field-set test
giftlist-gateway	172eb72	Added the TC-T2-26 test (late add after change→remove must not resurrect)
giftlist-web	523c2aa	The TC-T2-29 fix (trimLikeGiftLists) plus 2 regression tests
giftlist-reservations	—	No code change since run 1

Environment notes

- PUBLIC_HOST:** giftlist-devenv/.env holds PUBLIC_HOST=192.168.1.111 (a LAN IP), by Ryan's explicit decision for this run; acceptance cases were driven through that LAN address throughout.
- Browser for acceptance:** the built-in browser pane (mcp__Claude_Browser__*) could not reach this host at all, on either localhost or the LAN address — a tool/network-topology limitation, not a permission denial or application defect. The acceptance leg was instead driven through Claude in Chrome (mcp__claude-in-chrome__*), running in Ryan's real Chrome on this Mac, which reached both addresses without issue.
- Docker outage:** the Docker daemon stopped on its own mid-run (not caused by any command in this session). Once restarted, all four PR worktrees were re-confirmed clean and at their exact tested heads before the stack was rebuilt from the same heads (make reset && make up); all seven containers came back healthy and smoke checks passed again on both hosts.
- Browser evidence format:** the acceptance evidence is captured as DOM text/JSON (page text, Mongo documents, captured bus payloads), not image screenshots.

Automated suites

Repo	Suite	Command	Passed/Failed/Skipped	Duration	vs run 1
giftlist-web	Vitest	npx vitest run	230/0/0 (27 files)	5.08s	+2 (TC-T2-29 regression tests)
giftlist-giftlists	UnitTests + Architecture	dotnet test tests/GiftLists.UnitTests	221/0/2	75ms	+1 (TC-T2-28)
giftlist-gateway	UnitTests + Architecture	dotnet test tests/Gateway.UnitTests	88/0/2	689ms	same
giftlist-reservations	UnitTests + Architecture	dotnet test tests/Reservations.UnitTests	69/0/2	62ms	same
giftlist-giftlists	IntegrationTests	dotnet test tests/GiftLists.IntegrationTests	41/0/0	59s	same count; includes strengthened TC-T2-27 race test
giftlist-gateway	IntegrationTests	dotnet test tests/Gateway.IntegrationTests	103/0/0	13s	+1 (TC-T2-26)
giftlist-reservations	IntegrationTests	dotnet test tests/Reservations.IntegrationTests	19/0/0	4s	same

No environmental reds this run. The 2 skips per repo's unit suite are pre-existing deferred architecture rules, unrelated to GL-137.

TC-T2-27 — special handling

The race test did not go red on the equal-ChangedAt branch during the full-suite run above. A separate 5x solo-run drift measurement was taken, per run-2 instructions, to gauge the false-red risk:

Run	Result	Duration
1	Passed	215 ms
2	Passed	221 ms
3	Passed	219 ms
4	Passed	221 ms
5	Passed	217 ms

Result: 5/5 passed, 0/5 equal ChangedAt. Each pass is an independent race with differing ChangedAt stamps, exercising the "later wins" guarantee; no false-red observed in this sample.

Test cases (ticket) — automated-level

Case	Title	Level	Outcome	Notes
TC-T2-04	Non-owner's change rejected	integration (GiftLists)	PASS	
TC-T2-05	Unauthenticated caller cannot change	integration (Gateway)	PASS	
TC-T2-06	Guest view has no edit control	web	PASS	
TC-T2-07	Edit input stops at 2000 chars	web	PASS	
TC-T2-08	Service accepts 2000, rejects 2001	integration (GiftLists)	PASS	
TC-T2-09	No edit on expired list	integration + web	PASS	
TC-T2-10	Editing a removed item rejected	integration (GiftLists)	PASS	
TC-T2-11	Redelivered command publishes once	integration (GiftLists)	PASS	
TC-T2-12	Same value is a no-op	integration (GiftLists)	PASS	
TC-T2-13	Redelivered event leaves projection unchanged	integration (Gateway)	PASS	
TC-T2-14	Late add doesn't restore old description	integration (Gateway)	PASS	
TC-T2-15	Change before add converges	integration (Gateway)	PASS	
TC-T2-16	Change for removed item never returns it	integration (Gateway)	PASS	
TC-T2-17	Older late change ignored	integration (Gateway)	PASS	
TC-T2-19	"Not confirmed" notice on a change that never lands	web	PASS	
TC-T2-20	New event's field set is exact	integration (GiftLists)	PASS	Acceptance-level re-capture of the raw event bundled with TC-T2-01
TC-T2-21	Owner's edit flow never reads reservation data	integration (Gateway)	PASS	
TC-T2-	Change→remove→late add never resurrects	integration (Gateway)	PASS	New test, +1 vs run 1

26				
TC-T2-27	Racing edits store the later event's value	integration (GiftLists)	PASS	See "TC-T2-27 — special handling" above; a clean pass, not accepted drift
TC-T2-28	Command's field set is exact	unit (GiftLists)	PASS	New test, +1 vs run 1
TC-T2-29	Value that .NET trims but JS does not still confirms	web	PASS	This is the run-1 FAIL. New regression tests (+2 vs run 1) are green, proving the fix at web level; see also the acceptance-level case below

Test cases (ticket) — acceptance-level, via Claude in Chrome

All run at http://192.168.1.111:5173.

Case	Title	Outcome	Notes
TC-T2-01	Owner edits, sees it without reload	PASS	Subtitle shown with no reload; both stores match
TC-T2-02	Owner clears a description	PASS	Subtitle gone; both stores hold <code>description: null</code>
TC-T2-03	Guest sees the edited description on load	PASS	Fresh guest tab showed the edited text
TC-T2-18	Two quick edits from two tabs converge	PASS	Both stores converged on the later value; no notice on either tab
TC-T2-22	Guest payload unchanged after an edit	PASS	Field set exactly <code>{itemId,name,description,url,reserved}</code> ; <code>reserved: true</code> preserved
TC-T2-23	Regression: add/remove/rename, guest reserves	PASS	Rename propagated with no reload on the owner side; reservations unaffected
TC-T2-24	Guest sees no subtitle after owner clears	PASS	No subtitle; field set exact
TC-T2-25	Reservations still handles item events on [0.3.0]	PASS	Added item reserved successfully; removed item shows <code>isRemoved: true</code> in Reservations' own projection; error queue empty
TC-T2-29	Value that .NET trims but JS does not still confirms (acceptance leg)	PASS	Confirms the run-1 FAIL is fixed at acceptance level. Leading U+0085 and interior-line-break variants both confirmed with no false notice, stored codepoints matching exactly

Proposed test cases

Case	Title	Outcome
TC-GL-137-P10	Edit path sends/waits for exactly what GiftLists stores (leading U+0085, interior line breaks)	PASS

Not yet adopted — awaiting the human's decision at the results gate. Exercised directly at acceptance (not via a temporary web test file): all 4 input rows (leading U+0085 alone and combined with trailing, an interior `\n` with the preceding space preserved, and an interior U+0085) stored byte-for-byte as expected. No file was written to or left in the giftlist-web worktree.

Open items for the results gate

Raised by the run-2 coverage review; not decided here.

- TC-T2-27's failure-message wording** and the **optional retry-up-to-3** change — the coverage review recommends rewriting the race test's failure message so it points at the version guard rather than calling the outcome "a coin flip," and optionally bounding the equal-stamp case with a re-race (up to 3 attempts) before failing.
- PR #9's body note on TC-T2-27** — the coverage review asks that the PR body say the race test is evidence, not proof, and name the deterministic guarantee (`GiftListRepositoryTests.UpdateAsync_ShouldThrowConcurrencyException_WhenAnotherWriterChangedTheDescriptionFirst`) that actually backs it.

Findings encountered and resolved mid-run

Neither is a product defect; no acceptance "Then" was ever observed to fail because of either one.

1. Browser-pane network unreachability (tooling)

The built-in browser (mcp__Claude_Browser_*) could not reach the stack at either address:

- navigate to http://192.168.1.111:5173/ -> denied/failed
- navigate to http://localhost:5173/ -> denied/failed; landed on chrome-error://chromewebdata/
- Control check: navigate to https://example.com/ succeeded -- general internet access, no route to this host's local/LAN ports.

Tool/network-topology limitation, not a permission denial and not an application defect. Resolved by switching to Claude in Chrome, which runs in Ryan's real Chrome on this Mac and reached both addresses without issue. Full detail: evidence/acceptance-blocked-browser-unreachable.txt

2. Docker daemon stopped (environmental)

The Docker daemon stopped on its own at approximately 01:07 on 2026-10-03 (~/.docker/run/docker.sock gone; docker ps -a failed). Not caused by any command in this session -- no down/stop/reset/daemon command was issued here.

Resolved when Ryan restarted Docker (29.8.0). The four affected worktrees were re-confirmed clean and at the exact PR heads before the stack was rebuilt from the same heads (make -C giftlist-devenv reset && make -C giftlist-devenv up); all seven containers came back healthy and smoke checks passed again on both hosts.

Other notes

- Test accounts: one local test owner account was created through the app's own sign-up for this run, recorded only outside this report. No guest account exists; guest flows are unauthenticated by design.
- No product code or tests were changed on any PR branch during this run beyond the commits listed in the Environment section above, which were already on the branches before the run started.

Stack state

TORN DOWN. Run 2 was accepted, so the stack and environment were restored: the Chrome tab group closed; all seven giftlist-* containers and the network stopped and removed (make -C giftlist-devenv down); all seven main clones switched back to main, clean and matching origin/main; no Testcontainers-managed containers remained. The four PR worktrees were left untouched throughout and confirmed unchanged at teardown -- each still clean, still on its own PR branch, still at the exact tested head SHA.

Appendix — evidence

Remaining evidence not already shown inline above.

TC-T2-01 — owner page, Mongo (both stores)

See evidence/TC-T2-01-owner-page.txt, evidence/TC-T2-01-mongo-giftlists.json, evidence/TC-T2-01-mongo-gateway-projection.json

TC-T2-02 — Mongo, both stores hold null

See evidence/TC-T2-02-mongo-both-stores.json

TC-T2-03 — guest view

See evidence/TC-T2-03-guest-view.txt

TC-T2-18 — two-tab race

See evidence/TC-T2-18-two-tab-race.json

TC-T2-22 — guest payload field set

See evidence/TC-T2-22-guest-payload.json

TC-T2-23 / TC-T2-25 — rename propagation, reservations on [0.3.0]

See evidence/TC-T2-23-rename.json, evidence/TC-T2-25-reservations-projection.json
