

GL-136 — Owner can add a description when adding an item

Test report, run 1 (first run, not a re-test) · 2026-10-05 · PR goodsell-engineering/giftlist-web#13 · Epic: see ticket

Verdict: Ticket cases: PASS 10 · FAIL 0 · BLOCKED 0 · NOT RUN 0. Proposed cases (not yet adopted): P01-P05, P07 PASS 6 · FAIL 0; P06, P08 NOT RUN 2 (need an automated test). No FAIL or BLOCKED: ready for review.

Environment

Automated suites

Repo	Suite	Command	Passed/Failed/Skipped	Duration
giftlist-web	typecheck	npm run typecheck	exit 0	~2 s
giftlist-web	lint	npm run lint	exit 0	~1 s
giftlist-web	unit/component (Vitest)	npm run test	27 files, 238 passed / 0 failed / 0 skipped	5.7 s
giftlist-web	build	npm run build	exit 0 (chunk-size warning only)	~1 s
giftlist-gateway	IntegrationTests, one test	dotnet test tests/Gateway.IntegrationTests --filter "FullyQualifiedSchema_ShouldExposeReservedAsTheOnlyReservationFact"	1 passed / 0 / 0	81 ms (test), after hygiene ritual

Test cases

Case	Title	Level	Outcome	Evidence	Notes
TC-T1-01	Item added with a description shows the subtitle to the owner	acceptance	PASS	evidence/TC-T1-01-owner-row.png, TC-T1-01-stored.json	Projection and GiftLists both hold "Size M, navy". "Without a reload" is shown by P02, not here.
TC-T1-02	A guest sees the description subtitle	acceptance	PASS	evidence/TC-T1-02-guest.png	Subtitle is the next sibling of "Hoodie" in a separate context. Own list, not TC-T1-01's (each spec is independent).
TC-T1-03	Description input stops at 2000 characters	web	PASS	suite	ListDetailOwnerPage_ShouldCapTheAddItemDescriptionAt2000AndShowTheCounter_When2001CharactersArePasted (passed). Also ..._ShouldShowHowManyDescriptionCharactersAreUsed_WhenTheOwnerTypes.
TC-T1-04	A 2000-character description saves end to end	acceptance	PASS	TC-T1-04-before-submit.png, TC-T1-04-owner-row.png, TC-T1-04-lengths.json	Counter "2000 / 2000"; GiftLists length 2000, projection length 2000; value equal to the input. Subtitle wraps (screenshot).
TC-T1-05	An empty description sends no description	web	PASS	suite	..._ShouldSendNoDescription_WhenTheAddItemDescriptionIsOnlySpaces (passed). Real wire check: P04.

TC-T1-06	Item without description renders no subtitle, both views	web	PASS	suite	ListDetailOwnerPage_ShouldRenderNoDescriptionSubtitle_WhenTheItemHasNoDescription and SharedListPage_ShouldRenderNoDescriptionSubtitle_WhenTheItemHasNoDescription (both passed).
TC-T1-07	Pre-existing items unchanged (regression)	acceptance	PASS	TC-T1-07-phase1-guest(-items).png, TC-T1-07-phase2-guest(-items).png, TC-T1-07-diff.json	Two-phase: phase 1 on web main 08acbaef, phase 2 on b473c91, same Mongo data. Guest items box and full page: 0 differing pixels. Rows read "Book" and "Headphones + link" only. Mongo: legacy items description: null.
TC-T1-08	Guest item type has exactly the expected fields	integration + acceptance	PASS	TC-T1-08-introspection.json, TC-T1-08-sharedGiftList.json	Automated leg: Gateway Schema_ShouldExposeReservedAsTheOnlyReservationFactAndNoOwnerFacingSubscription passed. Acceptance: introspection of SharedGiftItemView returned sorted description, itemId, name, reserved, url; guest sharedGiftList items carry exactly those keys. The stricter response check is P01.
TC-T1-09	Adding with only a name still works	acceptance	PASS	TC-T1-09-owner.png, TC-T1-09-stored.json	"Book" appears; GiftLists and projection item description: null.
TC-T1-10	Next-line-only description sends no description	web	PASS	suite	..._ShouldSendNoDescription_WhenTheAddItemDescriptionIsOnlyANextLineCharacter (passed). The coverage review (P06) notes this test can pass vacuously; see P06 below.

Proposed test cases (not yet adopted)

Proposals awaiting a decision at the results gate.

Case	Title	Outcome	Evidence
TC-GL-136-P01	Guest list payload has exactly the expected keys, echoes no owner or reservation identifier	PASS	TC-GL-136-P01-response.json
TC-GL-136-P02	New item and subtitle appear in its own row without a page reload	PASS	TC-GL-136-P02-row.png, TC-GL-136-P02-values.json
TC-GL-136-P03	Pre-existing items look the same in the owner view after the upgrade	PASS	TC-GL-136-P03-phase1-owner-items.png, TC-GL-136-P03-phase2-owner-items.png, TC-GL-136-P03-diff.json
TC-GL-136-P04	Blank description sends no description field on the wire	PASS	TC-GL-136-P04-wire.json
TC-GL-136-P05	Multi-line, markup-like description renders as plain text with line breaks, both views	PASS	TC-GL-136-P05-owner.png, TC-GL-136-P05-guest.png, TC-GL-136-P05-values.json
TC-GL-136-P06	TC-T1-10's test proves U+0085 reached the field before submit (automated)	NOT RUN, needs an automated test (not acceptance level; no improvised test)	none
TC-GL-136-P07	Pasting past the cap does not split an emoji into a replacement character	PASS	TC-GL-136-P07-counter.png, TC-GL-136-P07-values.json
TC-GL-136-P08	Invalid link keeps the typed description and sends nothing (web level)	NOT RUN, needs an automated test (no improvised test)	none

Failures

None. No FAIL outcomes.

Run notes (not product failures; named so no red is mislabelled)

- **Harness createList race (test-code/environmental).** The first full attempt had 5 specs time out in the `devenv fixtures.ts createList` helper: it checks the target day with `isVisible()` immediately after opening the date picker, before the calendar has rendered, then clicks "next month" 24 times (screenshot showed October 2028). Not a product behaviour. I did not edit `fixtures.ts`; the specs use an inlined `createListRobust` (waits for the calendar to render and for each month step to change). First attempt results: `logs/attempt1-playwright-results.json`.
- **Gateway Auth rate limit (environmental, by design).** `AddRateLimiting` allows 5 `SignUp/Login` calls per fixed 1-minute window (GL-44). Running about 12 specs back to back each signing up an owner exceeded it in attempt 2, and the SPA showed "GiftList is temporarily unavailable" for TC-T1-04, TC-T1-08, TC-T1-09 (and P03's login). Checked: the Gateway code's limits, the SPA alert text in the failure's page snapshot, no service unhealthy, no error-queue messages. Those four were re-run after a 70 s pause (`logs/attempt2-...json`, `logs/attempt3-...json`).
- **P03 selector error (test code).** First P03 spec looked for a link named after the list; the dashboard link is "Manage". Fixed in the spec and re-run; it then passed.
- Recorded outcomes come from: attempt 2 (P01, P02, P04, P05, P07, TC-T1-01, TC-T1-02, TC-T1-07 passed), attempt 3 (TC-T1-04, TC-T1-08, TC-T1-09 passed), and a final single-spec run of P03 (passed, `evidence/playwright-results.json`). These specs were not modified between those runs, except P03's selector. No FAIL was labelled flaky; the reds above were each explained by a named cause, and each passed on the first run after its cause was removed.
- Evidence redaction: JWTs, passwords and release secrets are not in `evidence/`. Full-page owner screenshots show the share link of throwaway test lists on this local stack (reset on teardown), which carry share tokens. `test-accounts.local` in the run directory holds the phase-1 owner's throwaway credentials for TC-T1-07/P03; it must not be committed or published.

Proposed fixes

Proposals awaiting a decision at the results gate.

None (no failures).

Appendix: evidence

Share-link boxes of throwaway local test lists are blacked out in owner screenshots. JSON evidence is summarised in the tables above.
